

# Metrology benefits modern steel production

ACCURATE MEASUREMENTS IN ALL ENVIRONMENTS

Installing a Laser Tracking Reference System

To create and leave a permanent metrology network reference systems that will allow the laser tracker to position its self in the same place, time after time. Creating permanent reference points to work from, months or even years into the future.

This enables the mill engineers to collect measurement data at regular intervals that will monitor the level of wear, movement or deterioration of all types of plant and equipment.
